

400 Bad Request

One of the following error conditions:

- Unable to parse PUT or POST data.
- Missing PUT or POST data.
- The request attempts to PUT or POST data that is too large.
- The REST API call contains invalid child names as part of the path.
- The REST API call path is too long.
- The request contains an unrecognized server value.
- The index for the query is not defined in your Firebase Realtime Database Rules.
- The request does not support one of the query parameters that is specified.
- The request mixes query parameters with a shallow GET request.

401 Unauthorized

One of the following error conditions:

- The auth token has expired.
- The auth token used in the request is invalid.
- Authenticating with an access_token failed.
- The request violates your Firebase Realtime Database Rules.

404 Not Found

The specified Firebase database was not found.

500 Internal Server Error

The server returned an error. See the error message for further details.

503 Service Unavailable

The specified Firebase Realtime Database is temporarily unavailable, which means the request was not attempted.
